

Class I Enclosures for Class IV Lasers

Absolute Light Tight

InPlant LASER BLOCK of steel or aluminum are prefabricated to meet or exceed code requirements. Interlocking Building Systems in either 1³/₄" or 3" thickness provide a durable, safe, and light-tight enclosure.

Adapts to Equipment

The protective *double clad* Wall Panels are available in sizes 12' in height to 24' stacked and can easily be field-modified for custom applications to meet requirements. The design allows Wall Panels to be moved or rearranged and footprint expanded or reduced.

Environmental Control

InPlant LASER BLOCK Enclosures are insulated controllable environments and require different types of ventilation – structural support is incorporated as needed for specified HVAC or ancillary equipment. Light-tight ventilation louvers are standard for most designs.

Customizing prefabricated Modular Building Systems to fit your needs, since 1987.

Built to your Requirement

From a simple process cell to high throughput gantry or robotic automation, each LASER BLOCK Enclosure is prefabricated to required specifications — for light-tight safety; and fitted for environmental controls and ventilating equipment for dust, smoke, or noxious fumes.

Durable Products Built for Tomorrow

InPlant's LASER BLOCK Enclosures featuring *double clad* Wall Panels conforms to ANSI Z136 standards and FDA/CDRH compliance.

As industrial laser output increases, it is crucial to understand the interconnection of the various components. InPlant partners with the most experienced technicians in the industry to ensure quality service, products, and a safe working environment.

Solutions Created to Fit

InPlant Modular Building Systems are engineered as economical, intricate or heavy-duty as required – from small table-top enclosures to larger structures supporting heavy ancillary equipment which may incorporate a mezzanine. LASER BLOCK Enclosures can incorporate custom frames to accept specialty doors, fully automated turn-tables, shuttles, conveyors, robotic units, or overhead crane entry.

Expand, Reconfigure & Relocate

Since InPlant's Modular Units are fabricated and painted in the factory, the installation and assembly is cleaner than traditional construction and requires less downtime. Tax advantages make modular construction an economical choice.

For lower future spending and a maximum return on your investment, InPlant's Equipment Enclosures are built for change and growth. The non-progressive design allows the flexibility to expand, reconfigure and relocate your structure.
